The battery comes pre-installed in the camcorder, however you must remove the protective film on the battery before use.

- 1 Slide the front battery cover off.

- 2 Remove the battery.
- 3 Pull the film off.

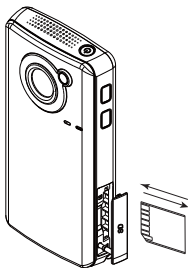

- 4 Reinsert the battery face up, making sure it is lined-up with the correct polarity marks.
- 5 Close the battery cover.

NOTE

Be sure to remove the protective film from the lens before using the camcorder.

To insert the SD™ Card (optional):

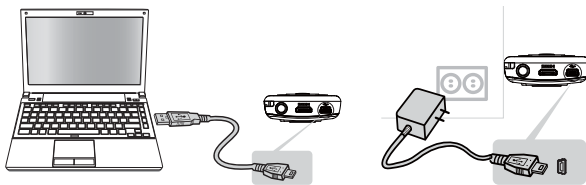

- 1 Flip open the SD™ Card cover.

To remove the SD™ Card, press inward to release it. When the card pops out, grasp it and pull it straight out.

Charge your battery before use

You must use the supplied Mini USB cable or AC adaptor to charge your camcorder before use. Turn off the camcorder before connecting the cable. A blinking light indicates active charging, and a solid light indicates that charging is complete. In AC charging mode, the solid light will turn off automatically after a few minutes.

Before Using your Camcorder

Using Wi-Fi®

Just like your Wi-Fi® connection on your computer, you will need a connection to a wireless network **and** an internet connection to upload videos/photos to social networking sites, stream videos, or use your camcorder as a wireless webcam. The camcorder does not use cellular communications to connect.

NOTE Closed wireless networks or wireless networks that must be accessed through a webpage login screen are not supported.

For optimal performance and ease of use on setting up Wi-Fi® functions and sharing, please refer to chapters 6 and 7 in the User's Guide on the supplied CD. It is recommended to print and/or store the User's Guide on your computer for easy access.

In order for Wi-Fi® connectivity to work correctly, make sure you have configured the setting correctly on your computer using the bundled CAMILEO® Air10 Connect Application (for Windows® based systems only) and that the camcorder is within an active wireless network area. The CAMILEO® AIR10 Connect application will be automatically installed to your computer when the mini USB cable is connected, or can be installed from the CD included with the camcorder.

The CD supplied with the camcorder contains these software applications:

- ❖ CAMILEO® AIR10 Connect is a PC application that provides a simple and friendly platform to manage the files in the camcorder, and control the interaction with your camcorder via either Wi-Fi or USB connection.

- ❖ ArcSoft MediaImpression is a user-friendly application that helps you manage your media, edit and playback video, and upload your files to websites easily.

Connecting the camcorder to your computer with the mini USB cable

When the USB connection is made to your computer for the first time, up to three AutoPlay screens will appear on your computer.

CD Drive (x:) AIR10_Connect -- CAMILEO® AIR10 Connect Application

DV (x:) -- Internal memory of the camcorder

Removable Disk (x:) -- Only shows if an SD card is installed in the camcorder

NOTE The AutoPlay screens may load on top of one another. Simply drag them into view. Check your taskbar if you do not see them.

If the CAMILEO® AIR10 Connect application does not start to install automatically, click on the CAMILEO® AIR10 Connect application.

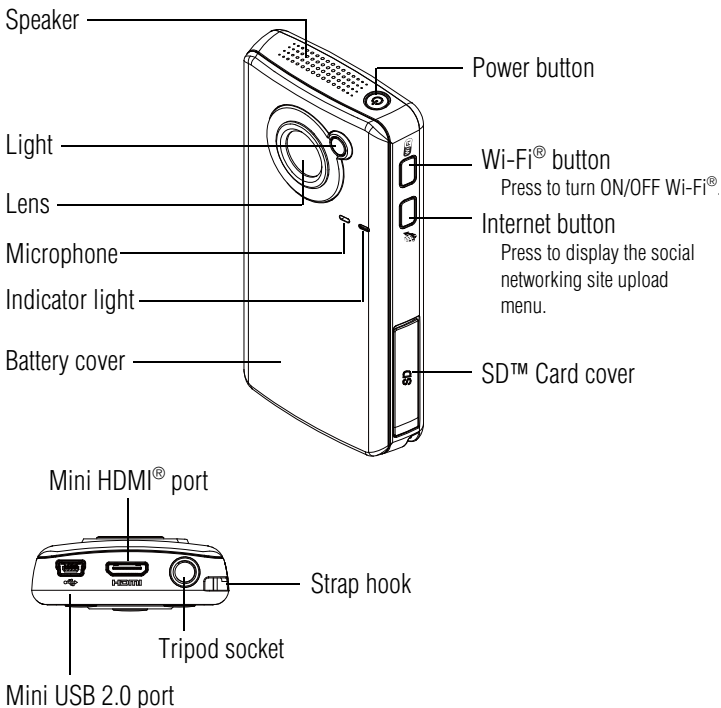

Depending on your computer settings during installation, up to three User Account Control screens (listed below) may pop up during the CAMILEO® AIR10 Connect installation process. Click OK on each one to proceed.

Microsoft Visual C++
Setup.exe
AIR10_Connect.exe

NOTE Uploading files may take a few minutes depending on the size of the files and the wireless network signal strength.
